

FlightTurf®

- Patented native fine fescue grass seed mix, originally designed for airfields
- Grass blade height naturally requires no mowing
- Wildlife and insect deterrent cultivars (ticks, deer, geese, etc.)
- Thrives in full sun or shade, drought tolerant, weed resistant, no fertilization requirements
- Requires annual maintenance for weeds or unintended grass presence

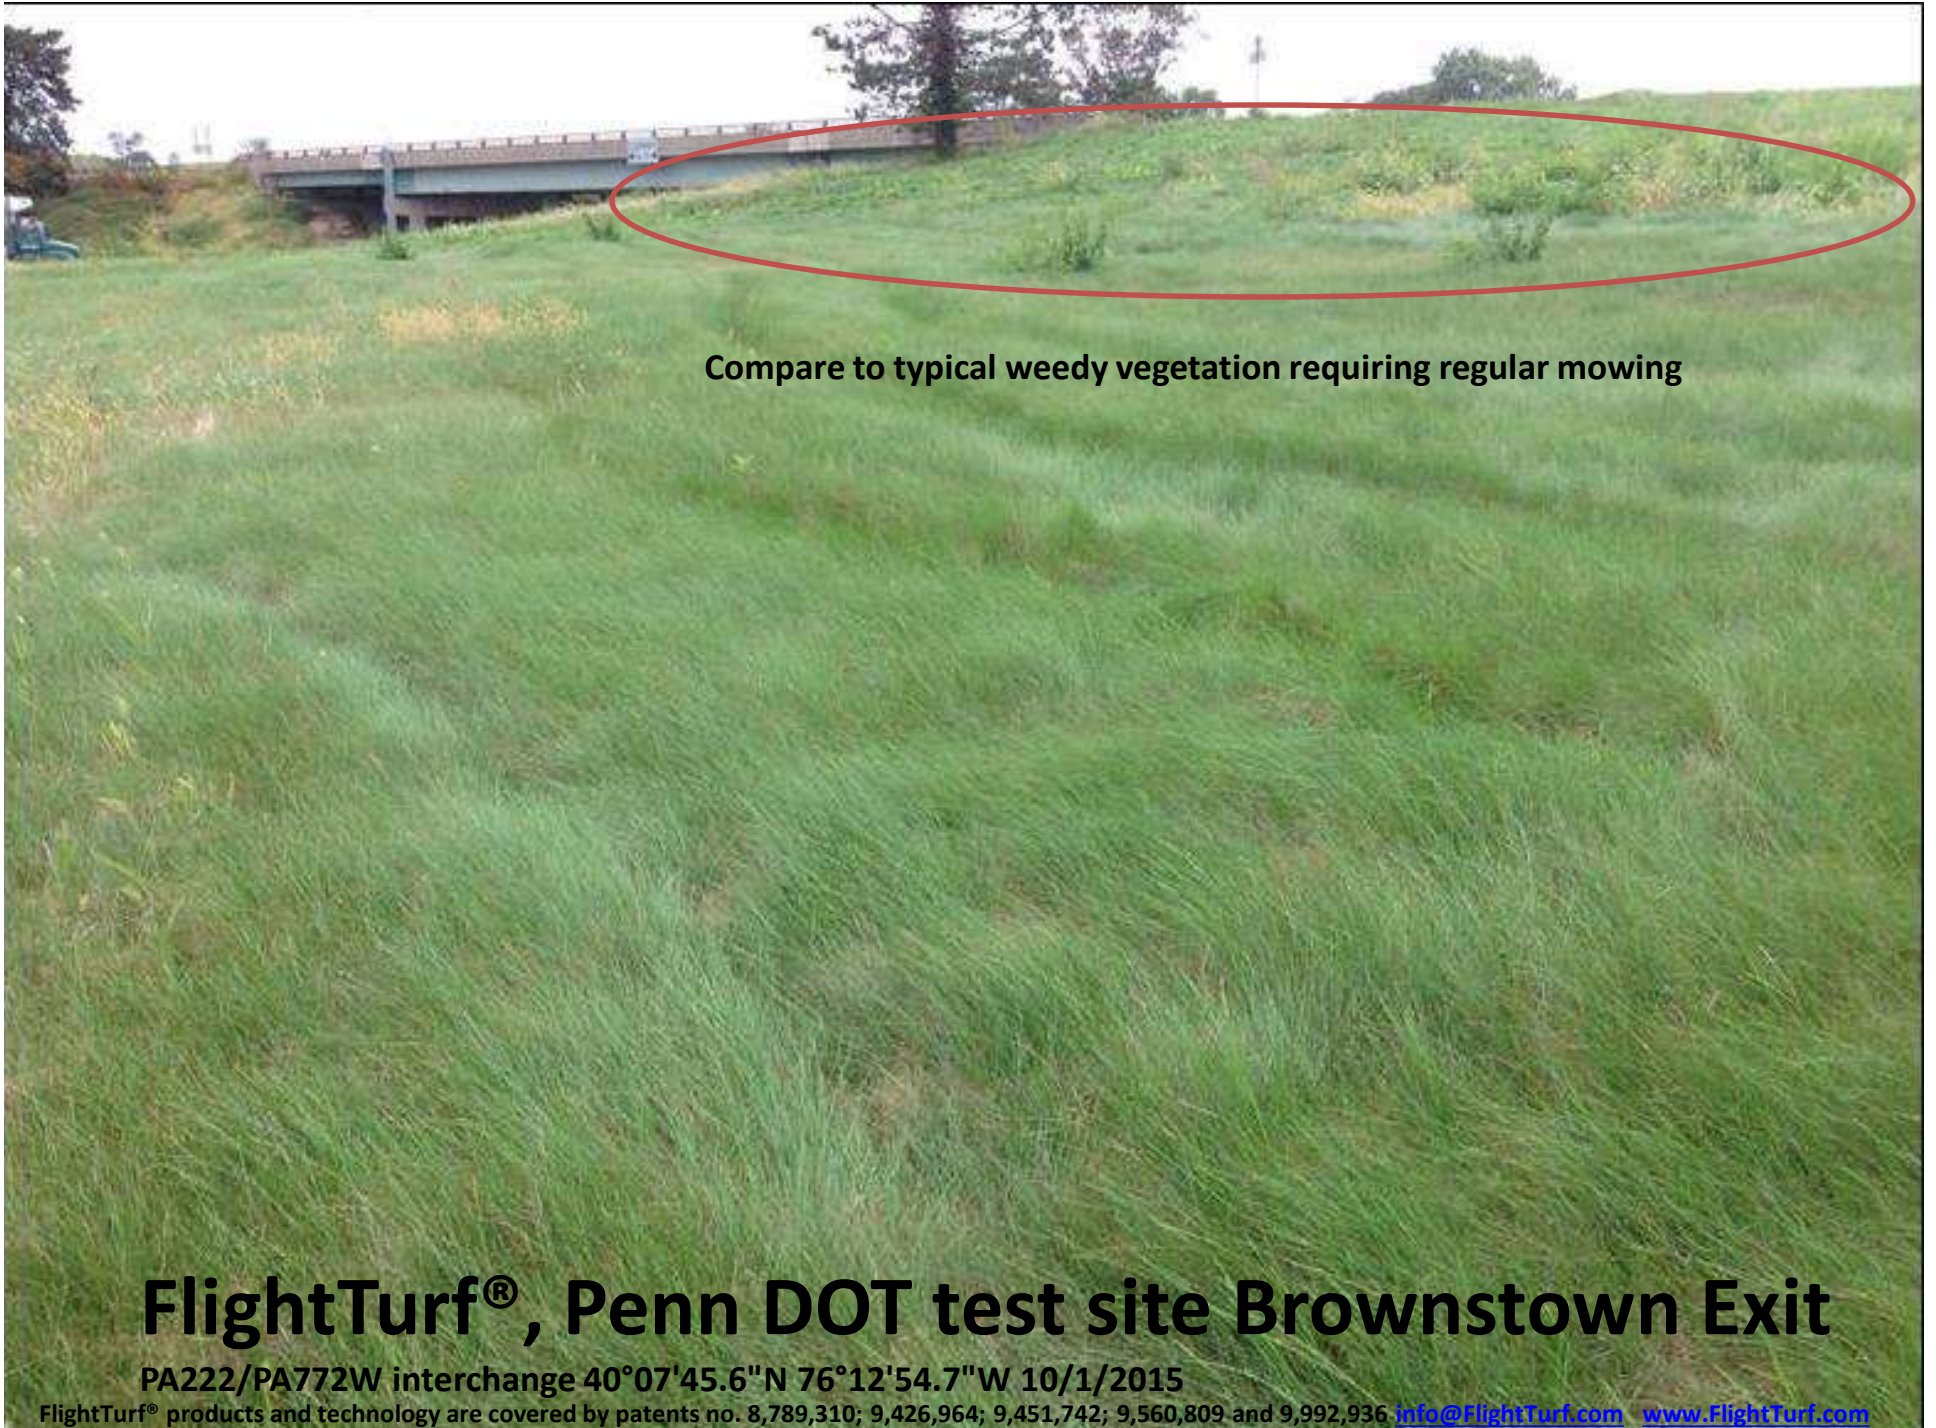

FlightTurf®

Features & Benefits

- Save money
- No mowing needed
- Full sun & shade
- Weed resistance
- Easy germination
- Cold/salt tolerance
- Drought tolerance
- Soil stabilization
- Erosion control
- Storm water infiltration
- Non-invasive
- Wildlife deterrence
- Deter wildlife that carry ticks
- Insect deterrence

Compare to typical weedy vegetation requiring regular mowing

**“This project marks the first time the patented grass will be cultivated under a solar array, and it will deter both wildlife and invasive vegetation while growing at an ultra-slow pace that requires only annual mowing. Though it may seem trivial to invest so much time and energy into grass, the fact is that it may save millions of dollars in maintenance costs over 25 years and reduce emissions by the metric ton.” Marc Mezzanotte - Dewberry Professional Services – 11/2015
